The “Global Village” Vessel

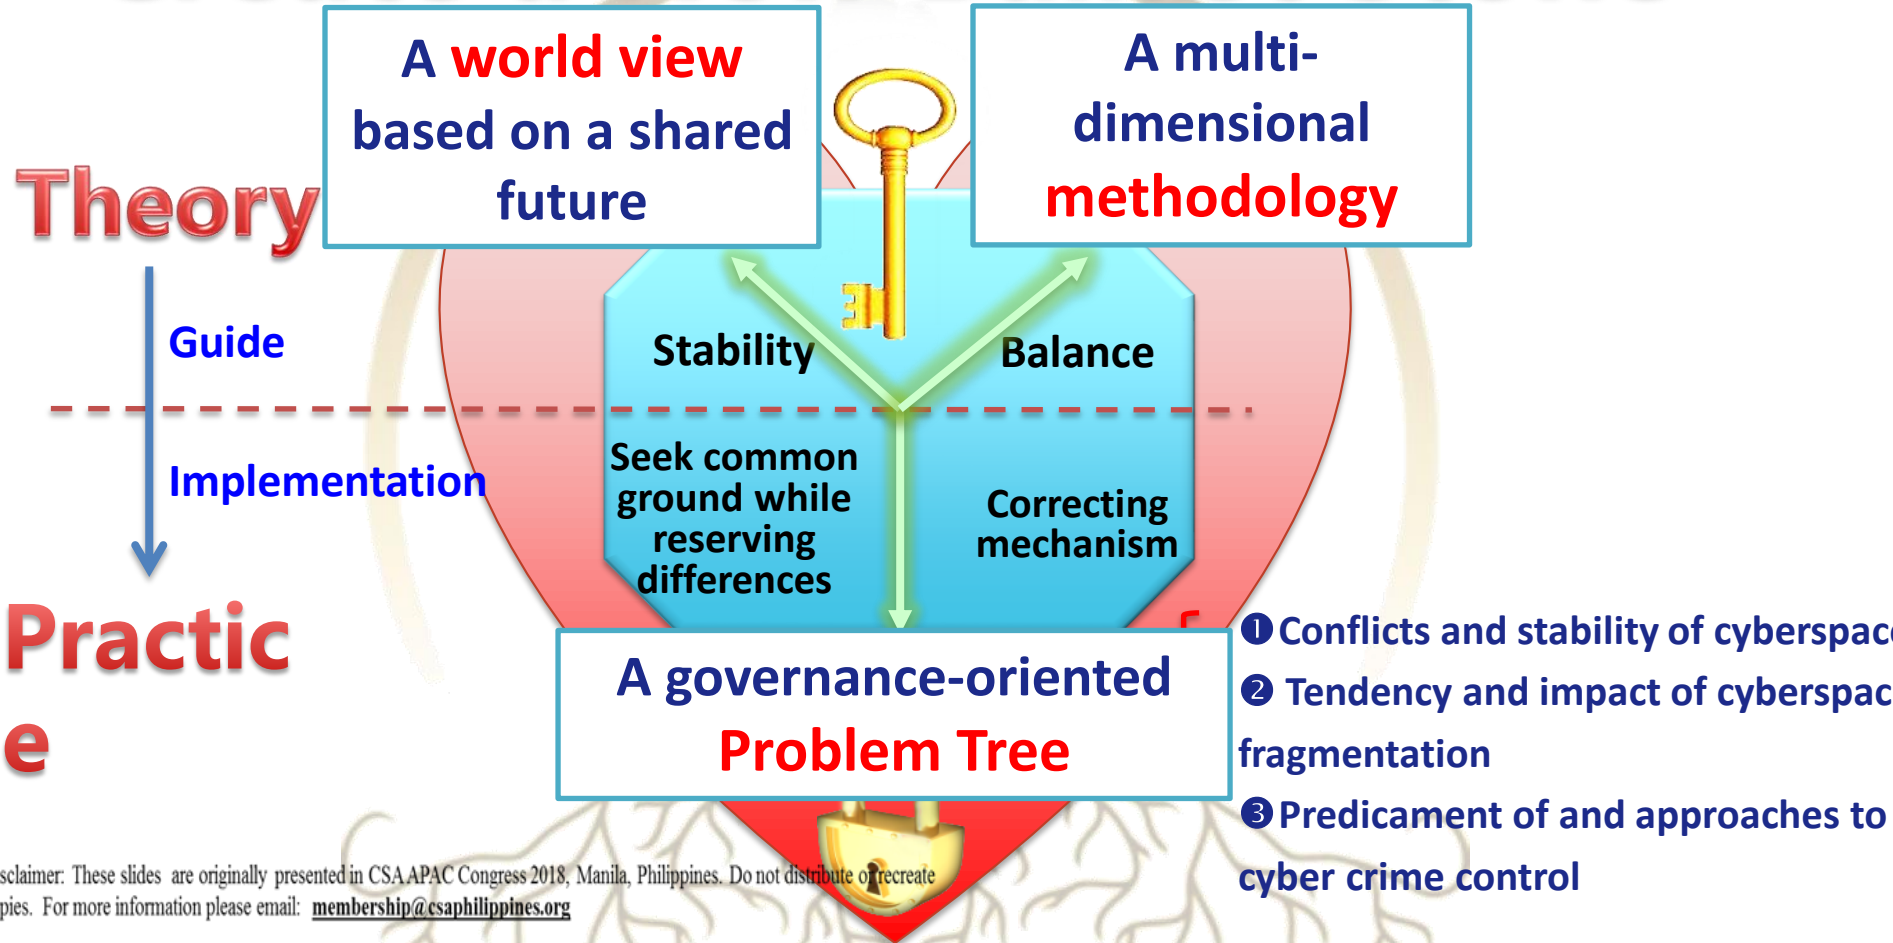

- The world today is featured by two things: change and chaos
- The Fourth Industrial Revolution has got the world connected by the Internet and turned it into a global village. The Internet and globalization together set off giant waves huge changes.
- Admit it or not, people across the world are now on the same boat.
- What will happen to the “Global Village” vessel if we are physically off onto the sea but mentally still in the jungle age?

Ballast Stone

- Facing uncertainties and instabilities, we find the previous "ballast stone" that has kept the relationships among big powers stable—trade—already shattered.
- We must make move from the Cold War mentality to co-governance.
- Mankind designs and builds a new ballast stone by nurturing insights and wisdom in a new civilization.

- ❸ Predicament of and approaches to cyber crime control

A World view based on a shared future

In an era of the Internet and globalization, everyone woven into a big web of interests, connected, linked, and counterbalanced, with less room for arbitrariness and isolation. This is the new world order and new form of existence in the cyber world.

Patriotism without consideration of the overall interests of mankind will result in beggar-thy-neighbor policies and even wars.

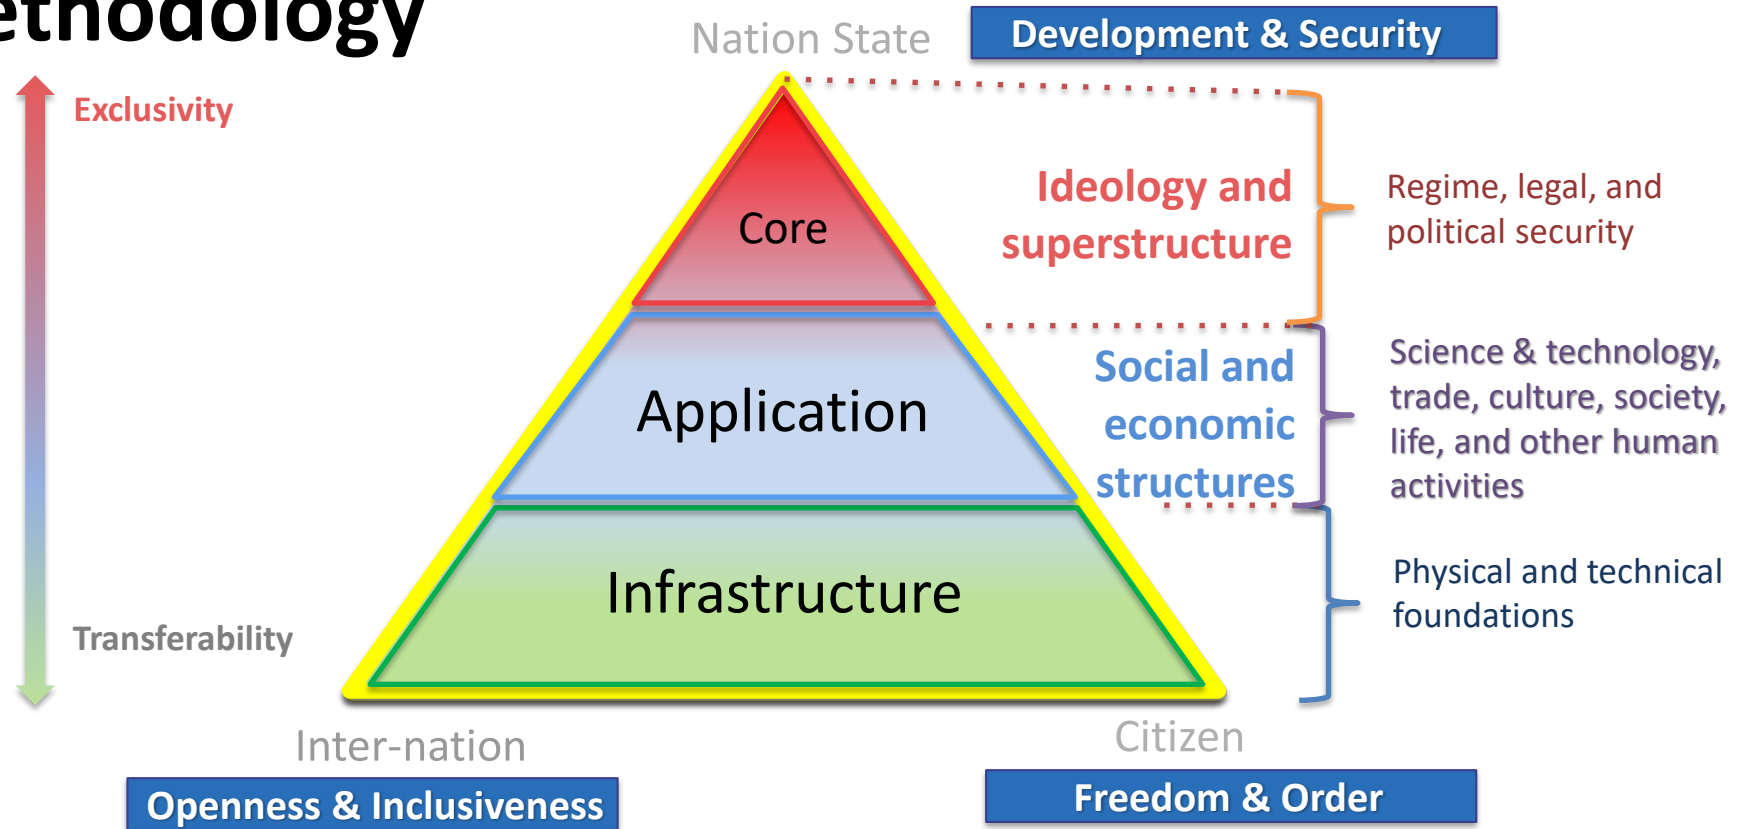

The world is smaller but we need a broader mind. It takes wisdom and a world view based on a shared future for us to live in this global village in harmony.

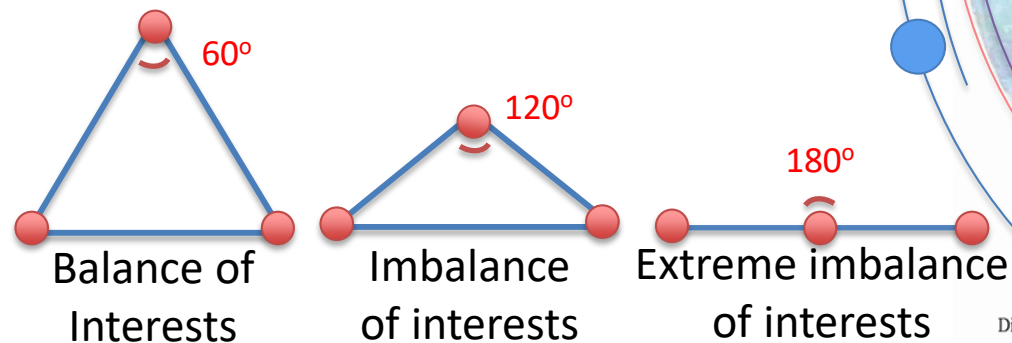

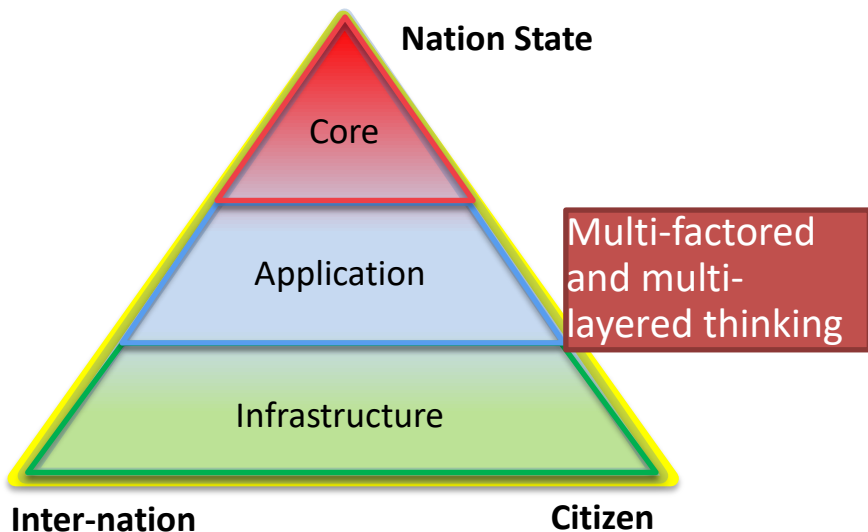

Rise to see a bigger picture and try to understand others while bearing in mind that we all have a shared future. See one country as only part of the world. See the world as a whole. Love not only your motherland, but also the world and mankind.

Wrap Up: Balance and Stability of the Ballast Stone

Between East and West Geography

- The openness of the Internet determines that history will move only towards synergy and that civilizations should not collide and fight.
- We should get rid of the competing values of the East and the West to reach a consensus on a new, global culture that upholds harmony despite disparities.

Between Virtual World and Real World Space

- The Internet is more than just a virtual world. It fully reflects the real world and it amplifies, shrinks, distorts, and folds it the physical world, with a significant butterfly effect to add to its instabilities and uncertainties.
- We should understand and leverage the special features of cyberspace to take hold of a good balance and the turning point between the two worlds.
- Strive for a balance between technology and people. Our mentality must keep up with the progress of society and technologies.

Between Present and Future Time

- Balance between short-term and long-term interests. Going after only immediate interests will lead to an unbalanced world pattern, undermine the shared future interests of mankind and let no one win.
- In the Internet age, all parties should seek and expand common ground, and overthrow the primitive philosophy of competition and survival.
